

PETG

PETG is extremely easy to fabricate and to thermoform. This combined with the high transparency and high impact strength has made PETG a reliable solution in many applications where A-PET, PVC, PMMA or glass traditionally has been used.

PETG is known in the industry for its superior quality level. Clarity and surface quality on the PETG sheets is known to be the best.

- it is a cost effective polymer, offering faster cycle times which in turn save time, labour and money.
- it is compatible with foodstuffs, making it an excellent choice when food approvals are necessary.
- it has more than 2 times the impact strength of high impact PMMA, yet is very easy to thermoform or cold bend into complex shapes.
- it also has a good chemical resistance to the most common chemic.

Applications: Indoor and outdoor signs, shelving and racking systems, food displays/bin/dividers, thermoformed covers, vending machine faces, medical equipment (packaging etc), industrial equipment (machine coverings, machine protections and many different kinds of technical parts).

RANGE AT STOCK			
Article code	Article description	Thickness (mm)	Size (mm)
028VTR005	TRANSPARENT PETG SHEET	0,5	2050 x 1250
028VTR0075		0,75	2050 x 1250
028VTR0101		1	2050 x 1250
028VTR01015		1,5	3050 x 2050
028VTR02		2	3050 x 2050
028VTR0301		3	3050 x 2050
028VTS01		ANTI-GLARE TRANSPARENT PETG SHEET	1
