

COMPACT POLYSTYRENE

Because of its characteristics, **Compact Polystyrene** is similar to compact PVC; its surface is glossy on a side and opaque on the other and for this reason it can be used not only for printing, but also for all those cases in which a light support is needed, with small dimensions and low price compared to other plastic materials. It is thermoformable and can be finished with the most common tools.

Applications: Poster-designing, advertising signs, displays.
